## TO WHOMSOEVER IT MAY CONCERN

This project, titled *"Touchless HCI for Media Control Using Hand Gestures on NVIDIA Jetson Nano"*, has been reviewed and evaluated by the undersigned faculty mentor. The system design, implementation approach, performance evaluation, and documentation were examined for technical correctness, feasibility, and alignment with the problem statement.

The project demonstrates the use of MediaPipe Hands for real-time hand landmark detection, gesture classification logic, and integration with VLC media control through keyboard-based interaction. Performance metrics including gesture recognition accuracy, frame rate stability, and end-to-end latency have been validated under controlled testing conditions.

Based on this review, the project is approved for final submission to the competition.
